Compression cable lugs are connectors used to securely attach a cable (usually electrical) to another surface — like a terminal, a busbar, or equipment. They are typically made of copper or aluminum and are used to ensure a strong electrical connection that can handle high currents without overheating. The term 'compression' comes from the way they are installed: you insert the cable into the lug and then compress (crimp) it with a special tool (a compression or hydraulic crimper) to make a tight, permanent bond.
