Abstracts

The global Compression Fitting market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

A compression fitting is a type of coupling used to connect two pipes or a pipe to a fixture or valve. A compression coupling works by using clamping force to seal the fitting. The unit commonly consists of a compression nut, a compression ring and a seat. The compression ring, often called a ferrule, is placed on the tubing with the nut behind it. The tubing is then inserted into the seat, and the nut is screwed onto the seat. As the nut is tightened, it compresses the ring around the tubing, creating a leak-free seal.

The USA leading players in this market are Parker Hannifin, Swagelok, Brennan and Eaton, which accounts for above 55% of total production value.

This report studies the global Compression Fitting production, demand, key manufacturers, and key regions.
