### **Abstracts**

According to our (Global Info Research) latest study, the global Compression Ignition Engines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Compression Ignition Engines work by compressing just the air or air plus residual combustion gases in the exhaust (called exhaust gas recirculation, 'EGR'). Air is drawn into the chamber during the intake stroke and compressed during the compression stroke. This increases the air temperature within the cylinder, causing the atomized diesel fuel injected into the combustion chamber to ignite.
