The compressor balance weight is a balancing accessory used inside the compressor. Its main function is to reduce and offset the vibration and unbalanced force generated by the compressor during operation. During the operation of the compressor, due to the movement of the rotor, piston and other parts, uneven inertial force is often generated, resulting in vibration or noise, which not only affects the operating efficiency of the compressor, but also causes damage to the equipment. In order to avoid these problems, the balance block is installed on the rotor or shaft of the compressor to adjust and correct the imbalance, thereby ensuring the smooth operation of the compressor.
