## Abstracts

According to our (Global Info Research) latest study, the global Compressor Electric Motor market size was valued at US\$ 186 million in 2024 and is forecast to a readjusted size of USD 257 million by 2031 with a CAGR of 4.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Compressor motors are motors specifically used to drive compressor rotors to compress gas or refrigerant and provide power. The market size in 2024 is expected to be US\$190 million. If calculated at a compound annual growth rate of 4.8%, the market size in 2023 will be approximately US\$181 million. The price of a single unit varies depending on power and efficiency levels, ranging from approximately US\$150 to US\$1,330. Market opportunities mainly come from the rapid growth of refrigeration and HVAC systems and industrial air compressors. Technology trends include meeting IE3/IE4 high-efficiency standards and integrating variable-frequency drives, and moving toward integrated permanent magnet motors and smart IoT interconnection and predictive maintenance. In the future, the focus will be on higher efficiency levels (such as IE5 and above), modular integration of VFDs and motors, miniaturized design, and digital energy management solutions.
