According to our (Global Info Research) latest study, the global Compressor Engine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Compressor Engine is a mechanical device that increases the pressure of a gas by reducing its volume. An air compressor is a specific type of gas compressor that converts power into potential energy stored in pressurized air. Compressors are similar to pumps, but they focus on changing the density or volume of the gas, while pumps focus on pressurizing and transporting liquids.

The Compressor Engine industry chain consists of various segments, such as end users, types, and geography. Some of the major end users of compressors are oil and gas industry, power sector, manufacturing sector, chemicals and petrochemical industry, and others. The types of compressors include positive displacement and dynamic compressors. Positive displacement compressors work by forcing air into a chamber whose volume is decreased, while dynamic compressors work by accelerating the air to a high velocity and then decelerating it to create pressure.
