Compressor valves are valves used within a compressor to allow gas flow to and from the cylinder area. They operate based on pressure difference: if the pressure below the valve is greater than the pressure above plus the spring force, it opens. The valves function as spring-loaded non-return valves, with the gas only being able to flow in one direction.

Global Compressor Valve key players include HOERBIGE, Cook Compression, Burckhardt Compression, CPI, etc. Global top four manufacturers hold a share over 20%.

Asia-Pacific is the largest market, with a share about 40%, followed by Europe, and North America, both have a share over 50 percent.

In terms of product, Plate Valves is the largest segment, with a share over 35%. And in terms of application, the largest application is Mechanical Field, followed by Oil and Gas, Ships, Metallurgy, etc.
