Abstracts

Computed radiography and digital radiography are imaging techniques that use electromagnetic radiations, such as X-rays.

Scope of the Report:

This report studies the Computed Radiography and Digital Radiography market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Computed Radiography and Digital Radiography market by product type and applications/end industries.

Computed radiography is similar to conventional radiography; however, it uses imaging plates made of photostimulable phosphor instead of films. Computed radiography and digital radiography are preferred over conventional radiography because they require lesser processing time, do not require chemical processing, and are able to produce high-quality digital images.

The global Computed Radiography and Digital Radiography market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Computed Radiography and Digital Radiography.
