## Abstracts

According to our (Global Info Research) latest study, the global Computer-Aided Manufacturing Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Computer-aided manufacturing (CAM) is the use of software and computer-controlled machinery to automate the manufacturing processes. CAM software assists engineers, architects, designers in manufacturing and designing objects, specifically computer numerical control (CNC) machining. CAM is the resulting computer-aided process for computer-aided designing (CAD) and computer-aided engineering (CAE), since the model generated in CAD and tested in CAE can be input for CAM software, which helps control the machine tool. It is mainly used to control the operations in the manufacturing plant. Computer-aided manufacturing (CAM) software are used to program manufacturing processes, especially CNC machines. It uses assemblies formed to generate toolpath that drive machine tools to turn designs into physical parts.

Rise in demand for sophisticated computer-aided manufacturing in various industries such as automobiles, aerospace and defense, and others drives the growth of the CAM Software market. Furthermore, surge in industrialization and increase in use of CAM software in packaging machinery drive the CAM market growth. In addition, rise in adoption of cloud technologies is expected to provide lucrative opportunities for the market growth. However, availability of open-source and free CAM software impede the growth of this market.
