According to our (Global Info Research) latest study, the global Computer Based Training Software market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A virtual reality game engine, or VR game engine, provides game developers with the framework for creating a VR video game experience.

A VR game engine often contains a virtual reality SDK, which allows developers to design, build, and test their games. These tools enable developers to create and edit 3D characters and fully immersive 3D experiences. VR game engines, similar to game engine software, help developers focus on creating an engaging product for the end user instead of wasting efforts on tying all elements of a gaming system together.
