According to our (Global Info Research) latest study, the global Computer Container Technology market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

With computer?ever have the situation where a program runs perfectly great on one machine, but then turns into a clunky mess when it is moved to the next? This has the potential to occur when migrating the software from a developer's PC to a test server, or a physical server in a company data center, to a cloud server. Issues arise when moving software due to differences between machine environments, such as the installed OS, SSL libraries, storage, security, and network topology. Container technology, also known as just a container, is a method to package an application so it can be run, with its dependencies, isolated from other processes.
