## Abstracts

Computer Engineering is a discipline that integrates several fields of computer science and electronics engineering required to develop computer hardware and software.

Scope of the Report:

Engineers usually have training in electronic engineering (or electrical engineering), software design, and hardware-software integration instead of only software engineering or electronic engineering. Computer engineers are involved in many hardware and software aspects of computing, from the design of individual microcontrollers, microprocessors, personal computers, and supercomputers, to circuit design. This field of engineering not only focuses on how computer systems themselves work, but also how they integrate into the larger picture.[]

The global Computer Engineering market is valued at 1890000 million USD in 2017 and is expected to reach 1890000 million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
