A computer fan is any fan inside, or attached to, a computer case used for active cooling, and may refer to fans that draw cooler air into the case from the outside, expel warm air from inside, or move air across a heat sink to cool a particular component

According to our (Global Info Research) latest study, the global Computer Fans market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Laptop cooler fans reduce the device's operating temperature which both limits heat exposure to the hardware and makes the device itself more comfortable to use. Laptops include built-in cooling fans and can be placed on notebook cooler pads to reduce operating temperature. Prolonged heat exposure and component overheating can damage a computer's components over time, whereas extreme overheating can actually break the system. Laptops have limited space to work with for cooling, which makes the cooling fans vital to the device's well-being.
