Abstracts

The global Computer Monitor Arm market size is expected to reach \$ 1286 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Computer Monitor Arm is a desk-mounted or post-mounted adjustable support system for computer displays, designed to provide height adjustment, tilt, swivel, rotation and extension so that users can position the screen more ergonomically and free up desktop space. It is widely used for office PCs, home-office workstations, gaming setups and professional multi-monitor desks. In 2025, Global Computer Monitor Arm sales are estimated at 12,000 k units, with an average ex-works price of about 67.34 US\$ /unit. The Computer Monitor Arm industry chain starts from steel, aluminum, springs, gas-lift modules, joints and VESA components upstream, passes through structural design, metal processing, assembly and branding in manufacturing, and ends with office, home-office, gaming and professional workstation users downstream.

The key growth driver of the Computer Monitor Arm market is the continued need for ergonomic workstation optimization. OSHA recommends that the top of the monitor should be at or slightly below eye level and that users should have adequate monitor distance, which directly supports demand for adjustable arms rather than fixed stands. In addition, hybrid work remains structurally important, with 33% of employed people in the United States still doing some work at home on days worked in 2024, sustaining demand for compact and flexible desktop setups. A further driver is the shift toward dual-monitor, ultrawide and heavier-display configurations, which increasingly require purpose-built support solutions.

This report studies the global Computer Monitor Arm production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Computer Monitor Arm and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
