According to our (Global Info Research) latest study, the global Computer Numerical Control market size was valued at USD 12830 million in 2023 and is forecast to a readjusted size of USD 15840 million by 2030 with a CAGR of 3.1% during review period.

The Computer Numerical Control (CNC) market is the process of mechanizing machine tools that are operated by precisely programmed commands encrypted on a storage medium as opposed to controlled manually by devices. CNC machining is utilized across various sectors, including industrial machinery, automobile, healthcare, and electronics.

Increase in demand in mass production plants in various sectors, including defense & intelligence, electronics, automobile, and machinery supplements the market growth. However, high cost of maintenance and after sales services of CNC machines is expected to restrict the growth of the market. Moreover, increase in number of application areas and reduced cost of entire production process is expected to create numerous opportunities for the growth of the market.
