According to our (Global Info Research) latest study, the global Computer on Module market size was valued at USD 2318.4 million in 2023 and is forecast to a readjusted size of USD 5491.9 million by 2030 with a CAGR of 13.1% during review period.

The Computer on Module (CoM), which is sometimes referred to as a System on Module, is an alternative to single board computers for embedded systems offering a more flexible and contoured solution. It is designed to plug into a carrier, or base board, and is generally a small processor module with a CPU and standard I/O capability. The complex effort associated with designing a CPU subsystem is avoided by using CoM functionality and a custom base board. A Computer on Module (COM) offers a unique approach to product development and the often fully custom electronics typically contained within sophisticated devices. A CoM helps system designers realize a fully customized electronics assembly, complete with custom interfaces and form factor without the effort of a ground-up electronics design.

The major players in global computer on module (COM) market include Kontron, Congatec, Advantech, etc. The top 5 players occupy about 32% shares of the global market. Europe and North America are main markets, they occupy about 75% of the global market.

The Global Info Research report includes an overview of the development of the Computer on Module industry chain, the market status of Industrial Automation (ARM Architecture, X86 Architecture), Medical (ARM Architecture, X86 Architecture), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Computer on Module.
