The global Computer Room Cleaning Service market size is expected to reach \$ 6104 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

Computer Room Cleaning Service refers to specialized maintenance and cleaning services provided for computer rooms, server rooms, and small-to-medium IT facilities to ensure optimal environmental conditions, minimize dust and particulate accumulation, prevent electrostatic discharge (ESD), maintain airflow efficiency, and reduce equipment failure risk. Services include floor and ceiling cleaning, equipment surface cleaning, cable tray and raised-floor vacuuming, anti-static treatments, air duct and HVAC maintenance, emergency contamination response, and routine environmental monitoring using specialized tools and ESD-safe procedures designed for sensitive electronic equipment in mission-critical or operationally sensitive IT environments.

Computer Room Cleaning Service projects currently under construction or planned are primarily associated with new IT infrastructure development, government digitalization programs, cloud expansion, telecom network upgrades, educational and research facility modernization, and industrial IT room installation across North America, Europe, Asia-Pacific, the Middle East, and Latin America, involving Tier II to Tier IV facilities; operators of small and medium enterprise IT rooms, colocation centers, edge computing sites, and high-density server installations are increasingly integrating routine and emergency cleaning services into facility management contracts, while new technologies such as AI-enabled environmental monitoring, robotic cleaning systems, and modular data room construction are driving service demand in both urban and emerging digital hubs.
