## Abstracts

According to our (Global Info Research) latest study, the global Computer Screen market size was valued at US\$ 45963 million in 2025 and is forecast to a readjusted size of US\$ 60956 million by 2032 with a CAGR of 4.1% during review period.

In 2025, global Computer Screen production reached approximately 178 million units, with an average global market price of around US\$250 per unit.

A computer display is an electronic output device for personal computers, workstations, and professional applications, presenting images, text, and video information generated by the computer to the user. Displays vary by resolution, size, refresh rate, and panel type, catering to diverse applications from basic office work and web entertainment to professional design, esports, and video production. With growing demand for content creation, remote work, and high-end gaming, computer display technology continues to advance, incorporating innovations such as higher resolutions (2K/4K), high refresh rates, HDR, and wide color gamut, significantly enhancing user experience and visual performance.

The upstream of computer displays mainly includes LCD and OLED panel manufacturers, backlight module suppliers, driver IC suppliers, and raw material providers such as glass substrates, polarizers, and liquid crystal materials. Representative companies include BOE, CSOT, Samsung Display, LG Display, and Innolux. The downstream includes desktop/laptop OEMs, professional monitor manufacturers, gaming monitor brands, and distribution channels, such as Dell, HP, Lenovo, ASUS, Acer, Apple, and e-commerce/IT distribution platforms. The industry chain forms a complete ecosystem from raw material supply ? panel fabrication ?

module assembly ? device integration ? distribution and retail.

The computer display market is generally stable with moderate growth, driven by office digitalization, esports, content creation, and remote work demand. Entry-level 1080p displays still dominate the mass market, while the penetration of 2K and 4K screens is increasing, with high-end gaming and professional design markets showing significant growth. Upstream panel and raw material supply are relatively stable, supporting cost control and maintaining profitability. Market drivers include high-resolution content consumption, growth in esports, adoption of remote work, and expansion of professional design needs. Adverse factors include uncertainties in the global display supply chain, raw material price fluctuations, and intense price competition between different resolution segments. Overall, the computer display market is stratified, with high-end monitors showing strong growth potential, while mid- and low-end markets remain highly competitive.
