## Abstracts

The global Computerized Maintenance Management System (CMMS) Software market size is expected to reach \$ 2405 million by 2032, rising at a market growth of 9.5% CAGR during the forecast period (2026-2032).

Computerized maintenance management system (CMMS), also known as computerized maintenance management information system (CMMIS), is a software package that maintains a computer database of information about an organization's maintenance operations. This information is intended to help maintenance workers do their jobs more effectively (for example, determining which machines require maintenance and which storerooms contain the spare parts they need) and to help management make informed decisions (for example, calculating the cost of machine breakdown repair versus preventive maintenance for each machine, possibly leading to better allocation of resources). CMMS data may also be used to verify regulatory compliance. To properly control the maintenance of a facility, information is required to analyze what is occurring. Manually this requires a tremendous amount of effort and time. A CMMS also allows for record keeping, to track completed and assigned tasks in a timely and cost-effective manner. In recognition of this, companies have started using CMMS extensively to better control and organize maintenance management. The different steps of implementing a CMMS plan have been described in the diagram. A CMMS offers multiple core maintenance functionalities. It is not limited to manufacturing but expands to facilities, utilities, fleet, hospitals, sport areas and more where any type of equipment/assets are subject to repair and need maintenance.

North America is the largest market of Computerized Maintenance Management System (CMMS) Software, with about 45% market share. Europe is follower, accounting

for about 26% market share. The key players include IBM, Dude Solutions, Siveco, UpKeep, Accruent, Rockwell Automation (Fiix), ServiceChannel, and DPSI, etc. Global top 2 players hold a share nearly 25 percent. In terms of product, cloud based is the largest segment, with a share over 74%. And in terms of application, the largest application is industrial & manufacturing, followed by logistics & retail.

CMMS can be used by any organization which is required to carry out maintenance on equipment, assets or property, and is used across all industry sectors ranging from manufacturing, packaging, energy, health, education, food and beverage to facilities and fleet maintenance. Organizations of all sizes from the smallest maintenance companies requiring a more basic system to the large corporate businesses requiring a feature rich solution, will have use for a CMMS. Market for Industrial & Manufacturing segment is dominating the market, with about 50.6% market share, followed by Logistics & Retail industries, with 19.6% market share.
