Abstracts

The global Concentrating Solar Cooker market size is expected to reach \$ 1425.3 million by 2029, rising at a market growth of 5.0% CAGR during the forecast period (2023-2029).

Concentrated solar cookers have high utilization value and broad development prospects. Its development opportunities mainly come from the following aspects:

Environmental protection and energy utilization: As the global energy crisis and environmental pollution problems become increasingly serious, the development and utilization of renewable energy has become a focus for countries around the world. As a clean and renewable energy source, solar energy has attracted much attention. Concentrated solar cookers have high thermal efficiency and safety in solar energy utilization, so they have great market potential.

Rural energy needs: In developing countries, energy needs in rural areas are often more pressing. Concentrated solar cookers can be used as a reliable, low-cost energy solution to meet basic living needs in rural areas, such as cooking and heating. In addition, concentrating solar cookers also have broad application prospects in remote areas and outdoor camping scenarios.

Technological progress and cost reduction: With the continuous advancement of science and technology, the design and manufacturing technology of concentrating solar cookers have been optimized, and production costs have gradually reduced. This makes concentrating solar cookers more competitive in terms of price, further broadening their application scope.

Policy and financial support: In order to promote the development of renewable energy, many countries and regions have introduced relevant policies and financial support plans. The implementation of these policies and plans provides a strong guarantee for the development of the concentrated solar cooker industry.

Concentrated solar cookers use reflectors to focus sunlight on the bottom of the pot, and the temperature can reach over 500°C. The key component of this kind of solar cooker is the condenser mirror, which has certain requirements on mirror material and geometric shape. The most common condenser mirror is a silver-coated or aluminized glass mirror. There are also aluminum polished mirrors and polyester film aluminized materials.
