## Abstracts

According to our (Global Info Research) latest study, the global Concentrating Table market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The Deister Concentrating Tables are designed primarily for the concentration of a variety of minerals including, but not restricted to, iron, tungsten, chrome, tin, copper, gold, mercury, tantalum, silver and lead. Other applications include recovery of values from slags, drosses, and sweepings. They are also used in the treatment of clays and in the removal impurities from glass sand.

The Deister Concentrating tables have been shown to outperform virtually any other concentrating tables on the market today. Their rhomboidal shape, ease of operation, and low maintenance makes Deister tables the most economically sound choice for ore concentrating tables in today's market.
