According to our (Global Info Research) latest study, the global Concentric Eddy Current Separator market size was valued at US\$ 64.6 million in 2024 and is forecast to a readjusted size of USD 88.7 million by 2031 with a CAGR of 4.7% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Concentric Eddy Current Separator is a highly efficient separation device that uses concentrically arranged rotors and magnetic fields to generate eddy current effects, which are used to separate non-ferromagnetic metals (such as aluminum, copper) and non-metallic materials. It uses a high-speed rotating magnetic rotor to generate eddy currents within the metal particles, thereby separating the conductive materials from the mixture. The concentric design makes the magnetic field more uniform, suitable for processing homogeneous waste streams. The equipment is known for its high efficiency and low maintenance requirements, and is widely used in waste recycling, mineral processing and resource separation in industrial production.
