Abstracts

According to our (Global Info Research) latest study, the global Concrete Densifier market size was valued at USD 1066 million in 2023 and is forecast to a readjusted size of USD 1526.5 million by 2030 with a CAGR of 5.3% during review period.

A concrete densifier is a chemical applied to a concrete surface in order to fill pores, increasing surface density. Chemical densifiers are used on polished and non-polished concrete to reduce dusting and wear; on polished concrete surfaces densifiers help concrete take a better polish and make the surface less permeable to liquids so the slab does not require sealing.

Materials used in buildings are collectively known as building materials, which can be divided into structural materials, decorative materials and specialized materials. Structural materials include wood, bamboo, stone, cement, concrete, metal, masonry, ceramics, glass, engineering plastics, composites, etc.; decorative materials include a variety of coatings, paints, plating, veneers, various colors of ceramic tiles, glass with special effects, etc.; special materials are used for waterproofing, moisture-proofing, corrosion resistance, fire prevention, fire-retardant, acoustic, thermal insulation, heat preservation, sealing and so on. The building materials industry tends to develop towards ecological building materials, with the principle of saving resources and reducing environmental pollution, and realizing the easy recovery and recycling of building materials. Therefore, the development of building materials with the improvement of the living room ecological environment and health care functions, the development of alternative production of energy-consuming, environmentally polluting, toxic and harmful to the human body of building materials is the development of ecological building materials construction strategy, the construction industry will

continue to explore around the new materials. New building materials include a wide range of thermal insulation materials, heat insulation materials, high-strength materials and materials that breathe, etc. In 2022, the global green building materials market will be about 312.5 billion U.S. dollars.
