According to our (Global Info Research) latest study, the global Concrete Expansion Joint market size was valued at US\$ 967 million in 2025 and is forecast to a readjusted size of US\$ 1166 million by 2032 with a CAGR of 2.7% during review period.

Concrete joints are used to compensate when concrete expands or shrinks with changes in temperature. Concrete joints are normally used to prevent cracks when the concrete shrinks by creating forming, tooling, sawing and placing joint formers. The pre-planned cracks will provide a better finish concrete product and will be formed in specific locations where those cracks could be monitored. Sometimes because of the material and width or span of the concrete joints are required to improve the performance of the material and allow the materials to expand/contract or move without damaging other structures.

Global Concrete Expansion Joint key players include ZKHY, Roaby, GCP Applied Technologies, etc. Global top three manufacturers hold a share over 10%. Asia-Pacific is the largest market, with a share about 45%, followed by Europe, and North America, both have a share about 40 percent.
