Abstracts

Concrete expansion joints are cuts in concrete slabs that go completely through the slab to the base material. Expansion joints can also be the joints between walls and concrete slabs. The purpose of an expansion joint is to allow the concrete slab to expand and contract with temperature changes without cracking the slab.

Concrete expansion joints must be sealed with a flexible sealant or an expansion joint strip, to prevent water from penetrating the joint and deteriorating the sub base. As with any concrete repair, proper attention to joint preparation is essential to achieving a successful result. Before applying a sealant, the joint must be completely dry. This report focuses on Sealant for Expansion Joint in Concrete Infrastructure market.
