## Abstracts

According to our (Global Info Research) latest study, the global Concrete GPR market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Concrete GPR is a non-destructive testing technology used to scan and analyze concrete structures. It employs electromagnetic waves to detect embedded objects such as rebar, pipes, cables, voids, and cracks within concrete. GPR is commonly used in construction, maintenance, and renovation projects to assess structural integrity, locate utilities, and avoid damaging hidden objects during drilling or cutting. It provides real-time data and is valued for its ability to offer high-resolution imaging without causing any damage to the concrete itself.
