According to our (Global Info Research) latest study, the global Concrete Railway Sleeper market size was valued at USD 665.7 million in 2023 and is forecast to a readjusted size of USD 860.4 million by 2030 with a CAGR of 3.7% during review period.

A concrete sleeper is a type of railway sleeper made out of steel reinforced concrete.

Nowadays, concrete has become most commonly used type of sleepers. Concrete sleepers have longer life-cycle and lower maintenance cost than reinforced concrete sleepers. They are expected to withstand high dynamic loads and harsh environments. However, durability and long-term performance of Concrete sleepers are largely dependent on creep and shrinkage responses.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
