Abstracts

The global Concrete Tetrapod Moulds market size is expected to reach \$ 693 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Concrete Tetrapod Moulds are reusable moulds, usually made of steel or heavy-duty fabricated metal, used to cast concrete tetrapod blocks for coastal protection, breakwaters, seawalls, harbor engineering, riverbank reinforcement, and erosion-control projects. The mould determines the shape, size, surface quality, and dimensional accuracy of the concrete tetrapod, allowing the finished block to interlock effectively and dissipate wave energy in marine and hydraulic engineering applications.

In 2025, global Concrete Tetrapod Moulds production reached approximately 542,553 units, with an average global market price of around US\$ 940 per unit. The production capacity of Concrete Tetrapod Moulds is approximately 686 K units per year, the average gross profit margin was 28-31%.

The upstream supply chain includes steel plates, structural steel, welding materials, hinges, bolts, surface coating materials, cutting and forming equipment, machining services, and mould design engineering. Midstream suppliers design and manufacture tetrapod moulds according to project size, concrete block weight, and casting requirements. Downstream users mainly include precast concrete producers, marine engineering contractors, port construction companies, coastal protection projects, river management projects, and government infrastructure projects.

The cost structure of Concrete Tetrapod Moulds mainly consists of steel material cost, cutting and welding cost, machining and assembly cost, mould design cost, surface treatment or anti-rust coating cost, quality inspection cost, packaging and transportation

cost, and after-sales or customization service cost. Among these, steel materials and fabrication labor usually account for the largest share, while large-size customized moulds have higher costs due to heavier steel consumption, more complex welding, stricter dimensional control, and higher logistics expenses.
