Abstracts

The global Concrete Wet Spraying Trolley market size is expected to reach \$ 711 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

Concrete Wet Spraying Trolleys are mechanized wet-mix shotcrete equipment used for concrete spraying support in tunnels, mines, hydropower projects, underground caverns, slopes, and infrastructure construction. The equipment integrates a carrier chassis, concrete pumping system, spraying boom, nozzle manipulator, accelerator dosing system, hydraulic system, control unit, and operator cabin or remote-control system. It is mainly used to improve spraying efficiency, reduce rebound, enhance layer uniformity, improve worker safety, and ensure stable shotcrete construction quality. The industrial chain of Concrete Wet Spraying Trolleys includes upstream suppliers of engineering chassis, hydraulic components, concrete pumps, spraying booms, nozzles, accelerator dosing pumps, sensors, control systems, diesel engines or electric drives, wear-resistant pipes, hoses, steel structures, and electrical components. Midstream manufacturers integrate pumping systems, boom manipulators, wet spraying control, additive dosing, chassis mobility, operator interfaces, safety protection, and remote-control functions into complete wet spraying equipment. Downstream applications include tunnel construction, underground mining, railway and highway tunnels, hydropower stations, metro projects, slope protection, underground caverns, and civil infrastructure projects. Supporting services include equipment selection, operator training, installation, commissioning, maintenance, spare parts supply, nozzle replacement, pump servicing, and spraying process optimization. In 2025, global Concrete Wet Spraying Trolley production reached approximately 1,095 units, with an average global market price of around US\$420,000 per unit. The gross profit margin of major companies in the industry is between 28%-48%. In 2025, the global production

capacity of concrete wet spraying trolleys was approximately 1,564 units.

The Concrete Wet Spraying Trolley market is driven by tunnel construction, underground mining, hydropower projects, metro construction, slope protection, and stricter requirements for worker safety and shotcrete quality. Compared with manual spraying or small shotcrete machines, wet spraying trolleys provide higher productivity, lower rebound, better layer uniformity, more accurate accelerator dosing, and safer operation in underground or confined construction environments. Demand is mainly supported by railway and highway tunnels, mining roadway support, hydropower underground caverns, urban rail transit, and large infrastructure projects. Equipment suppliers are improving boom control accuracy, spraying stability, pump reliability, accelerator dosing precision, electric-drive options, remote operation, safety protection, and digital construction monitoring. Although annual unit demand is limited by high equipment value and project-based procurement, replacement and modernization demand remain stable. Overall, the market is expected to grow steadily with underground infrastructure expansion and construction mechanization.
