According to our (Global Info Research) latest study, the global Condensate Polishing Mixed Bed Resin market size was valued at US\$ 95.69 million in 2025 and is forecast to a readjusted size of US\$ 124 million by 2032 with a CAGR of 3.8% during review period.

Condensate polishing mixed bed resin refers to a combination of ion-exchange resins utilized in the condensate polishing units of power plants or industrial steam systems. Typically comprising hydrogen-form strong-acid cation exchange resins and hydroxide-form strong-base anion exchange resins, this system is designed to remove corrosive products?such as sodium, chloride, silica, iron, copper, and nickel?as well as dissolved ions from condensate water, thereby preventing impurities from re-entering critical equipment such as boilers, steam generators, steam turbines, and nuclear reactors.

The upstream supply chain primarily consists of styrene, divinylbenzene, porogens, cross-linking agents, sulfuric acid or chlorosulfonic acid, chloromethylation reagents, trimethylamine or dimethylethanolamine, sodium hydroxide, hydrochloric acid, pure water, and packaging materials. Downstream applications are predominantly found in nuclear power generation, thermal power generation, industrial boilers, and high-purity condensate recovery systems.

In 2025, the global sales volume is projected to reach approximately 15,000 cubic meters, with a global average price of approximately \$6,200 per cubic meter; the gross profit margins for major industry manufacturers are estimated to range between 32% and 45%.
