Scope of the Report:

This report focuses on the Condensing Unit in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The condensing unit market, by function is segmented into air conditioning, refrigeration, and heat pumps. The air conditioning segment is expected to dominate the condensing unit market during the forecast period. It is also expected to be the fastest-growing type segment, owing to the multi-utility of air-cooled condensing units in various end-use areas, such as hotels, schools, multistore office buildings, and industrial facilities, among others.

A condenser unit used in central air conditioning systems typically has a heat exchanger section to cool down and condense incoming refrigerant vapor into liquid, a compressor to raise the pressure of the refrigerant and move it along, and a fan for blowing outside air through the heat exchanger section to cool the refrigerant inside.

The worldwide market for Condensing Unit is expected to grow at a CAGR of roughly 8.2% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
