Scope of the Report:

This report focuses on the Conducting Polymers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Based on type, The global conducting polymers market has been segmented into electrically conducting and thermally conducting. The thermally conducting segment is projected to grow at a higher CAGR due to increasing miniaturization of electronic components requiring advanced and compact conducting polymers for conduction of heat in confined space. Thermally conducting polymers find major use in LED fixtures, heat sinks, interface materials, radiator end caps, fuel pumps, heat exchangers, medical devices, and instrument housing.

Based on application, The global conducting polymers market has been segmented into ESD/EMI shielding, electrostatic coating, antistatic packaging, capacitor, and others.

The ESD/EMI shielding application of the electrical & electronics industry accounts for a huge demand for conducting polymers. The major benefit of ESD/EMI shielding is that it increases the safety of air-gapped systems. It also helps prevent the sensitive electronic components and devices from static discharge and magnetic interference.

The worldwide market for Conducting Polymers is expected to grow at a CAGR of roughly 8.7% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
