According to our (Global Info Research) latest study, the global Companion Diagnostic market size was valued at USD 9075.3 million in 2023 and is forecast to a readjusted size of USD 31360 million by 2030 with a CAGR of 19.4% during review period.

A companion diagnostic device is a special type of invitro medical device that provides information, which is necessary for the effective and safe use of an analogous drug or biological product. Companion diagnostics are developed simultaneously with drugs to help include or exclude a certain group of patients for treatment with a particular drug based on their biological characteristics, which determines patients who respond and those who dont respond to the therapy.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive

to emerging public health needs.
