Conductive Foam Pad is a specialized material designed to provide both cushioning and electrical conductivity in various electronic and electromagnetic applications. Made from foam embedded with conductive materials such as carbon, metal particles, or conductive fibers, these pads are often used for electromagnetic interference (EMI) shielding, grounding, and electrostatic discharge (ESD) protection. They are highly compressible, making them ideal for creating secure electrical connections in tight spaces or between irregular surfaces. Conductive Foam Pads are widely utilized in electronic devices, circuit boards, and other sensitive equipment to ensure stable performance, minimize interference, and protect against static discharge.
