## Abstracts

According to our (Global Info Research) latest study, the global Conductive Organogel market size was valued at US\$ 439 million in 2025 and is forecast to a readjusted size of US\$ 1011 million by 2032 with a CAGR of 12.6% during review period.

Conductive organogel is a soft, flexible, and electrically conductive gel material in which an organic solvent is immobilized within a three-dimensional polymer, nanomaterial, or supramolecular network that enables electron or ion transport. These materials combine the mechanical flexibility and solvent retention of organogels with electrical conductivity provided by conductive fillers or intrinsically conductive components such as graphene, carbon nanotubes, MXenes, conductive polymers (PEDOT:PSS, polyaniline, polypyrrole), metal nanowires, ionic salts, or liquid metals. Conductive organogels are widely used in flexible electronics, wearable sensors, soft robotics, bioelectronics, energy storage devices, electronic skins, electromagnetic interference (EMI) shielding, and stretchable conductive interfaces due to their high deformability, tunable conductivity, self-healing capability, and low-temperature stability. The supply chain of conductive organogels begins with upstream raw material suppliers providing polymers, monomers, organic solvents, conductive nanomaterials, ionic liquids, surfactants, and crosslinking agents. Midstream manufacturers formulate and synthesize conductive organogel systems through polymerization, self-assembly, solvent exchange, or nanocomposite dispersion processes, followed by shaping, coating, printing, or encapsulation into functional components and devices. Downstream industries include consumer electronics, healthcare devices, automotive electronics, aerospace systems, smart textiles, biomedical engineering, and advanced energy storage sectors, where conductive organogels are integrated into flexible circuits, biosensors, supercapacitors, batteries, actuators, and human-machine interface technologies. In 2025, global

Conductive Organogel output was about 35,000 tons with 40,000 tons of capacity, average prices of USD 10,000–25,000 per ton, and gross margins around 33%.
