## Abstracts

The global Conductive Rubber Gasket market size is expected to reach \$ 706 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global conductive rubber gasket production reached approximately 51 m pcs, the average price is 10 usd/pcs. Conductive rubber gaskets are most commonly used in enclosure covers, doors, and penetrations to prevent or limit electromagnetic radiation that could interfere with other electronic components.

### Market Concentration and Key Players:

Internationally, the market concentration of conductive rubber gaskets is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Parker Hannifin and Stockwell Elastomers and other large manufacturers; from the domestic point of view, conductive rubber gaskets still have a lot of room for development.

### Manufacturing Processes and Market Trends:

Conductive rubber gasket takes rubber as matrix, and realizes conductive function by adding conductive filler such as carbon black and metal powder. Its manufacturing process mainly includes mixing, molding and vulcanization. Traditionally, it relies on mold for machining, but it has the characteristics of long cycle and limited precision. In recent years, advanced technologies such as laser processing have been applied, using lasers, beam expander mirrors, scanning galvanometers and other devices to achieve high-precision, high-efficiency cutting and molding through program control, adapting to the trend of miniaturization and thinness of electronic products.

In terms of market, the growth rate of the China market is particularly significant. The demand growth is mainly due to the rapid development of emerging industries such as 5G communication, new energy vehicles and smart wearable devices, which put forward higher requirements for electromagnetic shielding and electrostatic protection. Electronic equipment manufacturing is the largest application area, and the automotive industry, especially the battery management system and high-voltage wiring harness of new energy vehicles, has become an important driving force for demand growth.

In the future, the conductive rubber gasket industry will continue to develop towards high performance and high reliability, while environmental protection requirements will promote the development and application of green recyclable materials. Enterprises need to cope with challenges such as fluctuations in raw material prices through technological innovation and industrial chain collaboration to seize market opportunities.
