According to our (Global Info Research) latest study, the global Conductive Silver Paste for PI Film market size was valued at US\$ 135 million in 2025 and is forecast to a readjusted size of US\$ 252 million by 2032 with a CAGR of 9.3% during review period.

In 2025, global sales volume of Conductive Silver Paste for PI Film was approximately 125 tons, with an average global market price of around USD 1,050/kg. Gross margins of major manufacturers were generally in the range of 35%-55%.

Conductive Silver Paste for PI Film is a silver-based conductive paste specifically used for printing, coating or dispensing on the surface of polyimide (PI) film. It is mainly composed of silver powder, resin binder, solvent and functional additives. PI film features high temperature resistance, chemical corrosion resistance, high mechanical strength and good flexibility, making it an important insulating and supporting substrate in flexible electronics. After curing, the conductive silver paste forms stable conductive traces, electrodes, grounding layers or electromagnetic shielding layers on the PI film surface, enabling the originally insulating PI film to provide current transmission, signal connection and shielding protection functions. Key performance requirements for Conductive Silver Paste for PI Film include adhesion to PI film, bending resistance, curing condition adaptability, conductivity stability, printability and environmental reliability.

Upstream materials mainly include silver powder, resin, solvents, dispersants, leveling agents, curing agents and packaging materials. In the midstream, manufacturers produce paste products with different viscosity, solid content, sheet resistance and curing conditions through formulation design, dispersion and grinding, filtration,

defoaming and quality control. Downstream applications mainly include flexible printed circuit boards, RFID and flexible antennas, membrane switches, flexible displays, flexible sensors and other flexible electronic devices. Conductive Silver Paste for PI Film is a key material for forming conductive patterns and enabling functional integration in PI-based flexible electronics manufacturing.
