Abstracts

The global Conductive Silver Powder market size is expected to reach \$ 12651 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Conductive silver powder is a kind of high conductive functional powder with metallic silver as the main body. It is usually prepared by chemical reduction, electrolysis, atomization, spray pyrolysis or mechanical grinding and other processes. Through particle size control, morphology control and surface modification, it has good conductivity, dispersion, filling, sintering activity and slurry adaptability. In 2025, global Conductive Silver Powder production reached approximately 2,856 MT, with an average global market price of around US\$ 2,922 per kg.

The market demand for conductive silver powder is mainly driven by the miniaturization, high power, high reliability of electronic components, and upgrading of conductive paste. Traditional thick film circuits, chip resistors, chip capacitors, ceramic substrates, and conductive adhesives still form a stable application foundation, while photovoltaic cells, automotive electronics, power semiconductors, SiC devices, servers, 5G communication, industrial control, and advanced packaging are driving the demand for high conductivity, low-temperature sintering, high dispersion, low ion residue, and highly reliable silver powder. In terms of price, conductive silver powder is greatly affected by the price of silver, and the cost of raw silver usually accounts for a relatively high proportion. Therefore, the market price will fluctuate with the price of precious metals, and different morphologies, particle sizes, purities, and surface treatment grades will form significant price differences. The future trend will focus on sub micron and nanometer level silver powders, low-temperature sintered silver powders, sheet-like highly conductive silver powders, composite conductive powders such as silver coated

copper, low silver paste systems, and highly reliable interconnect materials for power devices and advanced packaging.

This report studies the global Conductive Silver Powder production, demand, key manufacturers, and key regions.
