According to our (Global Info Research) latest study, the global Conductivity Electrodes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In industrial settings, conductivity electrodes are used to measure the conductivity of electrolytic solutions; these solutions may include liquids as nonconductive as ultra-pure water and as conductive as chemical process streams. Within these liquids, charge carriers which result in higher conductivity typically take the form of ions or dissolved inorganic particles. For this reason, conductivity electrodes are frequently used to measure ionization or total dissolved solids (TDS) in water quality applications.
