Abstracts

The global Conductivity Electrodes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In industrial settings, conductivity electrodes are used to measure the conductivity of electrolytic solutions; these solutions may include liquids as nonconductive as ultra-pure water and as conductive as chemical process streams. Within these liquids, charge carriers which result in higher conductivity typically take the form of ions or dissolved inorganic particles. For this reason, conductivity electrodes are frequently used to measure ionization or total dissolved solids (TDS) in water quality applications.

This report studies the global Conductivity Electrodes production, demand, key manufacturers, and key regions.
