According to our (Global Info Research) latest study, the global Conductivity Milk Analyzer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A conductivity milk analyzer is a device used to measure the electrical conductivity of dairy cow milk. This instrument assesses a cow's udder health by measuring the electrical conductivity of her milk. Conductivity is the ability of electricity to conduct through a substance, and healthy breast tissue typically has a relatively stable conductivity. When disease or other problems occur in a cow's udder, the conductivity of the milk may change, which can be detected and recorded with a conductivity milk analyzer.
