## Abstracts

The global Cone Beam DEXA Bone Densitometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The main consumer markets of the Cone Beam DEXA Bone Densitometer are North America and Asia. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. More and more hospitals and clinics are able to carry out imaging tests. As a result, the demand for Cone Beam DEXA Bone Densitometer will increase in the foreseeable future.

The Cone Beam DEXA Bone Densitometer is a subdivision of the DEXA Bone Densitometer. DEXA (dual-energy x-ray absorptiometry) bone densitometer is a medical device used to measure bone mineral density (BMD). It works by emitting two low-dose x-ray beams of different energy levels, which can differentiate between bone tissue and soft tissue. By measuring the attenuation of these beams as they pass through the bones, the DEXA machine can calculate the bone mineral density of the scanned area. This information can be used to diagnose osteoporosis and assess fracture risk, as well as to monitor the effects of treatment for osteoporosis and other bone conditions.
