Abstracts

The global Cone Co-rotating Twin-screw Extruder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market prospect for cone co-rotating twin-screw extruders is robust. These machines play a vital role in various industries, including plastics, food processing, pharmaceuticals, and chemicals. Their capability to efficiently blend, compound, and process materials with high precision and consistency drives demand. In plastics, they enable the production of customized polymers with desired properties. In the food industry, they facilitate efficient mixing and extrusion of ingredients. However, competition from alternative technologies and the need for specialized expertise in operation and maintenance can pose challenges. As industries seek enhanced production efficiency and product quality, the demand for advanced extruders is likely to persist, especially with ongoing technological advancements and customization options.

Cone Co-rotating Twin-screw Extruder means that the screw shape in the extruder is conical, and the rotation direction of the two screws is the same. The extruder using conical co-directional twin screw technology is called conical co-directional twin screw extruder. The advantages of conical twin screw extruder are large extrusion force, but poor plasticizing performance, low output and high energy consumption; Although the parallel twin-screw granulator has good plasticizing performance, it has small extrusion force, low output and large energy consumption, so it is not satisfactory in actual use. In order to overcome the above shortcomings, the conical twin screw extruder has not only good plasticizing performance, but also good extrusion force. The conical twin screw extruder, whose conical screw rotates in the same direction, makes the processed plastic in the barrel after entering the barrel, in the barrel around the conical twin screw

into a figure-8 extrusion, increase the plasticizing time, reduce the friction between the plastic and the barrel screw, so as to ensure the plasticizing quality, reduce energy consumption; Because the screw used is conical, the good extrusion force performance of the conical twin-screw granulator is maintained.
