## Abstracts

The global Conference Tablet All in One Machine market size is expected to reach \$ 15212 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

The conference flat panel all-in-one device is an intelligent conference terminal that integrates a display screen, touch writing, wireless projection, video conferencing system, and audio system. It can replace traditional projectors, electronic whiteboards, and conference terminal equipment, and is widely used in corporate conference rooms, government agencies, and educational training scenarios to enable remote collaboration and local interactive office work. It features high-resolution display, multi-touch, system compatibility, and cloud collaboration capabilities. Based on industry data and shipment structure estimates, global sales of all-in-one conference tablets are projected to reach approximately 7.18 million units in 2025, with an average selling price of around US\$1,350 per unit and a capacity utilization rate of approximately 78%. The upstream of the industry chain mainly includes LCD panel manufacturers, touch module manufacturers, main control chip manufacturers, camera and microphone module manufacturers, and structural component suppliers. The midstream consists of complete machine manufacturers and brand manufacturers, while the downstream covers enterprise offices, government agencies, financial institutions, medical institutions, and the education and training industry. The overall gross profit margin is approximately 28%, with leading brands achieving over 35% due to software services and ecosystem capabilities. The product cost structure is primarily composed of LCD display modules (approximately 45%), motherboards and chips (approximately 18%), touch components (approximately 12%), audio/video modules (approximately 8%), and structural components and complete machine assembly (approximately 10%). Other costs account for approximately 7%. On the demand side, the downstream demand list

includes enterprise digital meeting upgrade needs, hybrid office needs, remote collaboration needs, smart government needs, and smart education needs. The downstream customer list includes large enterprise groups, SMEs, government agencies, schools and training institutions, medical institutions, and financial institutions. In terms of business opportunities, policy drivers are reflected in the continuous promotion of policies for digital economy development, smart office, and information technology construction. Technological innovation drivers are reflected in the continuous upgrades of AI voice recognition, intelligent meeting minutes, 8K display, low-latency touch control, and cross-platform collaboration. Changes in consumer demands are reflected in the shift from single display devices to integrated collaborative terminals, and from hardware procurement to integrated hardware and software services and subscription models. At the same time, users are paying more attention to user experience, system stability, and data security.

The all-in-one conference tablet is at a critical stage of upgrading from a 'hardware replacement product' to a 'core entry point for collaborative office work.' Future industry competition will no longer focus solely on hardware performance, but rather on the deep integration of operating system ecosystems, software capabilities, and industry solutions. On the one hand, with the continuous advancement of enterprise digital transformation and the normalization of remote work, meeting efficiency and collaborative experience have become rigid demands, driving the continued penetration of products into SMEs and traditional industries. On the other hand, the industry is also showing a clear stratification trend. The high-end market is dominated by manufacturers with self-developed systems and cloud platform capabilities, while the mid-to-low-end market is highly competitive and gradually moving towards price transparency. Meanwhile, the introduction of AI capabilities will become an important variable in the next stage. For example, automatic meeting minutes, multilingual translation, and intelligent content analysis will significantly enhance product added value. Coupled with long-term investments in government and education informatization, industry demand is highly stable. In the medium to long term, all-in-one conference tablets will gradually become part of enterprise office infrastructure, deeply integrated with video conferencing software, enterprise collaboration platforms, and cloud services, forming an integrated hardware and software ecosystem with the potential to continuously expand service revenue and enhance customer stickiness.
