Confined space operations services refer to the systematic safety management and technical execution services provided by professional organizations for entering or working in physically enclosed or semi-enclosed spaces with restricted access, poor natural ventilation, and a high risk of accumulating hazardous substances or causing oxygen deficiency and asphyxiation (such as storage tanks, underground pipelines, reaction vessels, and pits). Its core is comprehensive risk control throughout the entire process, specifically covering hazard identification before operations, gas detection and work permit approval, forced ventilation, continuous monitoring and real-time surveillance during operations, and emergency response support. This service aims to effectively control extreme risks such as poisoning, asphyxiation, fire, explosion, and collapse through professional procedures, equipment, and personnel, ensuring the safety and health of workers and guaranteeing the safe and compliant conduct of high-risk special operations in relevant industrial, municipal, and construction sectors.
