According to our (Global Info Research) latest study, the global Confocal Microscopes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The confocal microscope is a new instrument with high light sensitivity and high resolution developed in the past ten years. It uses laser light as the light source and consists of confocal imaging scanning system, electron optical system and microcomputer image analysis system. After the beam is focused, it lands on a small point at different depths of the sample (thick tissue or cell), and moves and scans. Through the electrical signal color imaging, the image formed by the reflected light at any point in the sample can be accurately received. down and generate a signal, which is transmitted to a color display, and then connected to a microcomputer image analysis system for analysis and processing.
