Abstracts

Conjugate vaccines refer to those vaccines that contain bacterial capsule polysaccharide or the antigen attached or conjugated to a protein.

Scope of the Report:

This report focuses on the Conjugate Vaccines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

This protein has a key role in enhancing the immunogenic property of the polysaccharide. These vaccines are mainly used to immunize infants and children against invasive disease caused by Hib bacteria, H. influenzae, Streptococcus pneumoniae, and Neisseria meningitidis.

The increase in use of conjugate vaccines for adults, rise in number of regulatory approvals for conjugate vaccines, growth in prevalence of diseases caused by microorganisms such as Streptococcus pneumoniae and Neisseria meningitidis, and technological advancements majorly drive the growth of the market. In contrast, low accessibility to vaccines in remote areas and complex production procedure of conjugate vaccine restraint the market growth.

The worldwide market for Conjugate Vaccines is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
