According to our (Global Info Research) latest study, the global Conjugated Polymer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Conjugated polymers are a special class of organic polymers whose molecular structure contains repeating units with conjugated electron systems. The conjugated electron system means that adjacent π -bonds and π -electrons can form a continuous conjugated structure, thereby expanding the distribution of electronic energy levels.

The characteristics of conjugated polymers: good optical properties, high electrical conductivity, structural diversity, good processability and plasticity. By rationally designing and adjusting the structure of conjugated polymers, more efficient photoelectric conversion, higher electrical conductivity, and a wider range of applications can be achieved.
