According to our (Global Info Research) latest study, the global Connected Home Security Device market size was valued at US\$ 610 million in 2025 and is forecast to a readjusted size of US\$ 997 million by 2032 with a CAGR of 7.2% during review period.

Connected Home Security Devices (HMSs) are smart hardware systems that integrate sensors, cameras, network communication modules, and cloud platforms or local gateways. They are capable of real-time monitoring of home environment anomalies, triggering alarms, and remotely notifying users or authorizing emergency responses via mobile applications. Their core functions include intrusion detection, video surveillance, environmental security, and proactive defense. Devices connect to the cloud or home hub via Wi-Fi, Zigbee, Z-Wave, Thread, or cellular networks, supporting user-defined arming modes and enabling inter-device?? (interconnection/linkage). Solutions typically offer cloud storage, AI recognition, and professional monitoring center proxy response services on a subscription basis. Essentially, it combines physical security with the Internet of Things (IoT) and artificial intelligence (AI), aiming to improve residential security and resident response speed to abnormal events through prevention, detection, and deterrence, while deeply integrating with the smart home ecosystem (lighting, thermostat, voice assistants).

The global Connected Home Security Device market exhibits a dual divergence in regional penetration and consumer habits. North America and Europe lead in penetration rates for home security cameras, smart locks, and DIY kits, with mature subscription-based AI recognition and 24/7 professional monitoring services. The focus is on transitioning towards privacy compliance, local edge computing, and cross-brand Matter protocol compatibility. The Asia-Pacific region, centered on China, Japan, South

Korea, and Australia, is driven by smart communities and young families, showing growth rates higher than the global average. However, Southeast Asia and South Asia remain limited by Wi-Fi coverage and purchasing power, with market presence concentrated in the mid-to-high-end segment. The current market situation is characterized by high-definition PTZ cameras, doorbell cameras, and smart sensor kits accounting for the majority of shipments, subscription service revenue growth exceeding hardware sales growth, and carrier-bundled home security packages becoming a new sales channel. Future trends focus on battery-free/energy-harvesting sensors, generative AI-based custom detection rules, and federated learning locally trained models. Key obstacles include: user concerns about privacy breaches and cloud data loss, inconsistent interoperability standards between devices, and price wars caused by product homogenization in the low-end market. Dynamically, insurance companies are collaborating with security equipment manufacturers to launch a 'premium discount in exchange for equipment data monitoring' model. At the regulatory level, the EU and various US states are continuously increasing their requirements for the localization of camera data. Meanwhile, the DIY installation trend has reduced the high professional installation revenue of traditional security companies, driving the industry to transform towards 'low-profit hardware + high-stickiness services'.
