The global Connected Lighting System market size is expected to reach \$ 2564 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Connected Lighting System is next-generation lighting solutions built on Internet of Things (IoT), wireless communication, and intelligent control technologies. By networking luminaires, sensors, controllers, gateways, and cloud platforms, they enable data interaction, centralized management, and intelligent collaborative control among lighting devices. The system typically supports communication protocols such as Zigbee, Bluetooth Mesh, Wi-Fi, DALI, KNX, or LoRa. It can automatically adjust light brightness, color temperature, and on/off status based on human activity, ambient light, time schedules, and energy demands, thereby improving energy efficiency and spatial intelligence. Connected lighting systems not only offer remote monitoring, fault diagnosis, scene linkage, and energy consumption analysis, but also deeply integrate with building automation, security, HVAC, and smart city platforms. They are widely used in commercial buildings, industrial facilities, road lighting, smart homes, hospitals, schools, and public infrastructure, forming an important component of smart buildings and smart cities.

The global Connected Lighting System market has maintained steady growth in recent years, exhibiting a development pattern of ?North America leading in technology, Europe driven by energy conservation, and Asia Pacific expanding in scale.? North America, leveraging its mature smart building ecosystem, high demand for digital management, and investment in energy-saving retrofits of commercial buildings, maintains its leadership in intelligent lighting control, cloud platform management, and IoT integration. The European market is primarily driven by green building regulations,

carbon reduction policies, and energy efficiency standards, with widespread applications in public infrastructure and smart city projects. The Asia Pacific region has experienced rapid growth driven by urbanization, smart parks, and industrial digital upgrades, becoming the fastest-growing region globally. The current market is moving towards wireless connectivity, low power consumption, AI-powered intelligent control, and platform integration, with lighting systems gradually evolving from simple lighting functions into gateways for building data acquisition and space management. At the same time, the industry also faces challenges such as high initial deployment costs, insufficient compatibility with different communication protocols, cybersecurity risks, and high system integration complexity. In the future, with the continued advancement of IoT, 5G, edge computing, and smart city construction, connected lighting systems will further upgrade towards intelligence, platformization, and energy conservation.
